SUMMARY

Computer Science Engineering graduate (CGPA: 9.1/10.0) with hands-on experience building and deploying full-stack web applications using Python, Django, JavaScript, and MySQL. Experience spans REST API development, database design, and applied machine learning, including model validation and deployment. Comfortable owning a feature end-to-end, from design through production release.

EDUCATION

B.E., Computer Science and Engineering

2022 – 2026

Mahendra Engineering College, Tamil Nadu • CGPA: 9.1/10.0 • 12th: 81% • 10th: 83%

TECHNICAL SKILLS

- Core: Python, Java, AI/ML, REST API Development, OOP, Data Structures, SQL, Backend Development
- Frameworks: Django, Flask, Streamlit | Frontend: HTML, CSS, JavaScript
- Databases: MySQL (SQL), MongoDB (NoSQL)
- ML & AI: Scikit-learn, Pandas, NumPy, TensorFlow, PyTorch, XGBoost, ResNet-18
- Tools & DevOps: Git, GitHub, CI/CD (GitHub Actions), PyCharm, IntelliJ IDEA

EXPERIENCE

Python Developer Intern | Cybernaut Edu-Tech LLP (Remote)

Feb 2025 – May 2025

- Wrote modular backend applications in Python using OOP and REST API design patterns; handled file processing, data transformation, and error handling across multiple backend components.
- Collaborated using Git/GitHub for version control and participated in team code reviews authored API documentation and internal workflow docs.

Salesforce Developer Virtual Intern | SmartBridge & SmartInternz

May 2024 – Jun 2024

Completed during the 3rd year of undergraduate study, while enrolled full-time.

- Completed an 8-week virtual internship covering Salesforce Fundamentals, Organizational Setup, and Process Automation via Trailhead earned Super Badges in Apex Specialist and Process Automation Specialist.
- Gained hands-on experience with Apex, unit testing/debugging, VS Code/CLI setup, and Lightning Web Components (LWC) & APIs.

PROJECTS

AI Career Assistant Platform | <https://github.com/Sabrin-s/ai-career-django.git> Technologies: Python, Django, MySQL, HTML, CSS, JavaScript, REST API, TF-IDF, Git, Render

- Built and deployed a full-stack app using Django (RESTful APIs) and MySQL to production on Render, including environment configuration, database migration, and static file handling.
- Implemented TF-IDF and cosine similarity to parse resumes and match candidates to job listings added a mock interview feature scoring answers on keyword coverage and structure.
- Developed a full-stack AI-powered career guidance platform using **Django**, **MySQL**, and **REST APIs** for resume analysis and job recommendations.
- Implemented **TF-IDF** and **Cosine Similarity** algorithms to match resumes with suitable job opportunities.

AI-Powered Medical Diagnosis Assistant | <https://github.com/Sabrin-s/AI-Powered-Medical-Diagnosis-Assistant-demo-git>

- Trained a supervised ML model reaching 97% accuracy on medical symptom data, validated using k-fold cross-validation on a held-out test set to check for overfitting. Built a real-time prediction interface with confidence scores; organized the codebase using OOP for easy extension.
- Performed feature engineering and data preprocessing (cleaning, encoding, normalization) on the symptom dataset using Pandas and NumPy prior to model training. Compared multiple classifiers (including XGBoost) during model selection and used feature importance analysis to identify the strongest predictive symptoms.

Attention-Based Multi-Modal Framework for Thyroid Disease Diagnosis | https://github.com/Sabrin-s/TYROID_DIS_PREDICTIONS_MAI.git

- Built a web app diagnosing thyroid disorders by combining BERT (clinical text) and ResNet-18 (ultrasound images) in one deep learning pipeline custom DMMSCN model hit 96.5% accuracy vs. XGBoost (85.7%), CNN (90.2%), DNN (88.3%).
- Included a chatbot, patient history tracking, diagnosis reports, and doctor booking. Built with Python, Flask, PyTorch, and TailwindCSS.
- Designed an attention-based fusion layer to combine text and image embeddings before classification and benchmarked it against single-modality baselines to quantify the accuracy gain from multi-modal input.
- Built the doctor-booking and patient-history modules with a relational schema to persist diagnosis history and support longitudinal patient tracking.

Secure Blockchain-Based Voting System | <https://github.com/Sabrin-s/BlockchainVotingSystem-in-python.git>

- Designed a blockchain-based voting system in Python where votes become tamper-proof once cast used cryptographic hashing for data integrity, blocked duplicate votes, and added a vote-verification step.
- Implemented block linking via SHA-256 hashing so any tampering with a past vote invalidates the chain and wrote a validation routine to detect and reject broken or altered chains.

CERTIFICATIONS

- AI Certification — Infosys Springboard
- SnowPro Associate Certification — Snowflake
- Salesforce Developer Virtual Internship — SmartBridge & SmartInternz, with AICTE (Jul 2024) | ID: SISFVIPAD2024-2553
- ServiceNow Virtual Internship – SmartBridge & ServiceNow University (October 2025) | Certificate ID: SNUA2053433
- UiPath Certified Automation Developer Associate - UiPath
- IBM AI & Cloud, Edunet Foundation + AICTE
